

Maulana Abul Kalam Azad University of Technology, West Bengal*(Formerly West Bengal University of Technology)***Syllabus for B. Tech in Computer Science & Engineering**

(Applicable from the academic session 2018-2019)

Signals & Systems**Code:** PEC-IT601C**Contacts:** 3L

Name of the Course:	Signals & Systems	
Course Code: PEC-IT601C	Semester: VI	
Duration: 6 months	Maximum Marks: 100	
Teaching Scheme	Examination Scheme	
Theory:3 hrs./week	Mid Semester exam: 15	
Tutorial: NIL	Assignment and Quiz: 10 marks	
	Attendance: 5 marks	
Practical: NIL	End Semester Exam:70 Marks	
Credit Points:	3	

Unit	Content	Hrs/Unit	Marks/Unit
1	Introduction to Signals and Systems : Signals and systems as seen in everyday life, and in various branches of engineering and science. Signal properties: periodicity, absolute integrability, determinism and stochastic character. Some special signals of importance: the unit step, the unit impulse, the sinusoid, the complex exponential, some special time-limited signals; continuous and discrete time signals, continuous and discrete amplitude signals. System properties: linearity: additivity and homogeneity, shift-invariance, causality, stability, realizability.Examples.	3	

2	<p>Behavior of continuous and discrete-time LTI systems (8 hours)</p> <p>Impulse response and step response, convolution, input-output behavior with periodic convergent inputs, cascade interconnections. Characterization of causality and stability of LTI systems. System representation through differential equations and difference equations. State-space Representation of systems. State-Space Analysis, Multi-input, multi-output representation. State Transition Matrix and its Role. Periodic inputs to an LTI system, the notion of a frequency response and its relation to the impulse response.</p>	8	
3	<p>Fourier, Laplace and z- Transforms</p> <p>Fourier series representation of periodic signals, Waveform Symmetries, Calculation of Fourier Coefficients. Fourier Transform, convolution/multiplication and their effect in the frequency domain, magnitude and phase response, Fourier domain duality. The Discrete- Time Fourier Transform (DTFT) and the Discrete Fourier Transform (DFT). Parseval's Theorem. Review of the Laplace Transform for continuous time signals and systems, system functions, poles and zeros of system functions and signals, Laplace domain analysis, solution to differential equations and system behavior. The z-Transform for discrete time signals and systems, system functions, poles and zeros of systems and sequences, z-domain analysis.</p>	10	
4.	<p>The Sampling Theorem and its implications. Spectra of sampled signals. Reconstruction: ideal interpolator, zero-order hold, first-order hold. Aliasing and its effects. Relation between continuous and discrete time systems. Introduction to the applications of signal and system theory: modulation for communication, filtering, feedback control systems.</p>	9	

Text book and Reference books:

1. A. V. Oppenheim, A. S. Willsky and S. H. Nawab, “ Signalsand systems”, Prentice Hall India,1997.
2. J. G. Proakis and D. G. Manolakis, “ Digital Signal Processing: Principles, Algorithms, and Applications” , Pearson,2006.
3. H. P. Hsu, “ Signals and systems”, Schaum’sseries, McGraw Hill Education,2010.
4. S. Haykinand B. V. Veen, “ Signals and Systems”, John Wiley and Sons,2007.
5. A. V. Oppenheim and R. W. Schafer, “ Discrete-Time Signal Processing”, Prentice Hall,2009.
6. M. J. Robert “ Fundamentals of Signals and Systems”, McGraw Hill Education, 2007.
7. B. P. Lathi, “ LinearSystems and Signals”, Oxford University Press,2009.
8. A. V. Oppenheim and R. W. Schafer, “ Discrete-Time Signal Processing”, Prentice Hall,2009.
9. M. J. Robert “ Fundamentals of Signals and Systems”, McGraw Hill Education, 2007.
10. B. P. Lathi, “ LinearSystems and Signals”, Oxford University Press,2009.
11. R. Anand, “Signals and Systems, Khanna Publishing House, 2018.

Course Outcomes:

- On completion of the course students will be able to
- Understand the concepts of continuous time and discrete time systems.
- Analyse systems in complex frequency domain.
- Understand sampling theorem and its implications.
- Understand the concepts of continuous time and discrete time systems.
